

DATA SET DESCRIPTION

Recent daily precipitation observations for Germany, quality control not completed yet

Version recent

Cite data set as: DWD Climate Data Center (CDC): Recent daily precipitation observations for Germany, quality control not completed yet, version recent, last accessed: <date>.

INTENT OF THE DATASET

The "recent" data have not completed quality control yet. They are obtained from DWD stations and legally and qualitatively equivalent partner stations operated for climatological and climate related applications. Comprehensive station metadata (station relocation, instrument change, time zones, change of algorithms) are included.

POINT OF CONTACT

Deutscher Wetterdienst
CDC - Vertrieb Klima und Umwelt
Frankfurter Straße 135
63067 Offenbach
Tel.: + 49 (0) 69 8062-4400
Fax.: + 49 (0) 69 8062-4499
Mail: klima.vertrieb@dwd.de

DATA DESCRIPTION

Spatial coverage stations in Germany

Temporal coverage rolling: 500 days before yesterday - until yesterday

Temporal resolution daily

Format(s) The station observations (produkt_*.txt) are zipped together with the station metadata. The latter are given in *.txt as well as *.html. The file Metadaten_Parameter* contains a listing of the parameters measured at the station (the parameter portfolio) with begin, end, units, measurement procedures, averaging formulas, measurement times and applied time units which are all related to the station Id and the station name valid now. The instrument history is sorted according to the parameters (see file Metadaten_Geraete*). There, the history of sensor height, type of instrument and measurement procedure is given, together with the historical station names. The station ID is unique and does not change over time. For a convenient documentation of station name change, see Metadaten_Stationsname*. The geographical metadata of the station (longitude, latitude, height) is listed in Metadaten_Geographie*.txt together with the Stations_id and the current station name. All these information is combined into a single zip-file for each station: *_[Stations_id]_akt.zip. An overview over all stations with start and end dates is given in the station list: [Stationsliste](#). Note that for convenience, the list comprises not only stations given here, but also stations with more complicated copyright regulations which may be obtained for certain applications, requiring discussion with the point of contact.

Parameters The file produkt*.txt comprises following parameters:

STATIONS_ID	station id	
MESS_DATUM	date	yyyymmdd
QN_6	quality level of next columns	coding see paragraph "Quality information"
RS	daily precipitation height	mm
RSF	precipitation form	

	0	no precipitation (conventional or automatic measurement), relates to WMO code 10	0
	1	only rain (before 1979)	
	4	unknown form of recorded precipitation	
	6	only rain; only liquid precipitation at automatic stations, relates to WMO code 11	
	7	only snow; only solid precipitation at automatic stations, relates to WMO code 12	
	8	rain and snow (and/or "Schneeregen"); liquid and solid precipitation at automatic stations, relates to WMO code 13	
	9	error or missing value or no automatic determination of precipitation form, relates to WMO code 15	
SH_TAG	height of snow pack	cm	
NSH_TAG	fresh snow depth	cm	
eor	end of record	can be ignored	

Missing values are marked as -999. Note that the fresh snow depth is measured as the height of snow pack at a fixed time early in the morning (in contrast to the precipitation height, which refers to the time interval from 5:50 UTC to 5:50 UTC next day).

Uncertainties

The stations are nowadays selected and operated according to WMO guidelines. Though these guidelines aim at minimizing possible local effects, still some applications of certain parameters may require the consideration of local and regional effects.

Quality information

The quality levels "Qualitätsniveau" (QN) given here apply for the respective following columns. The values are the minima of the QN of the respective daily values. QN denotes the method of quality control, with which erroneous values are identified and apply for the whole set of parameters at a certain time. For the individual parameters there exist quality bytes in the internal DWD data base, which are not published here. Values identified as wrong are not published. Various methods of quality control (at different levels) are employed to decide which value is identified as wrong. In the past, different procedures have been employed. The quality procedures are coded as following:
 quality level (column header: QN_)
 1- only formal control during decoding and import
 2- controlled with individually defined criteria
 3- ROUTINE control with QUALIMET and QCSY
 5- historic, subjective procedures
 7- ROUTINE control, not yet corrected
 8- quality control outside ROUTINE
 9- ROUTINE control, not all parameters corrected
 10- ROUTINE control finished, respective corrections finished

DATA ORIGIN

This climate data are from the station network of DWD, operationally collected in the central MIRAKEL data base and archived, see Behrendt et al., 2011, and Kaspar et al., 2013. For details on current measurement and observation procedures see VuB 3 Beobachterhandbuch (DWD, 2014a), VuB 3 Technikerhandbuch (DWD, 2014b) and VuB 2 Wetterschlüsselhandbuch (DWD, 2013).

VALIDATION AND UNCERTAINTY ESTIMATE

The quality control (see Spengler, 2002) of this data is not completed yet. Various levels of quality control (see Kaspar et al., 2013) are in progress.

CONSIDERATIONS FOR APPLICATIONS

For any data analysis, the metadata available in the *.zip files should be taken into account.

ADDITIONAL INFORMATION

For extending the time series into the past, see subdirectories ../historical/. When data from both directories "historical" and "recent" are used together, the difference in the quality control procedure should be considered. For the long term stability consider the uncertainties explained in the data set descriptions within subdirectories /historical/.
