

DATASET DESCRIPTION

Phenological observations of wild plants, including forest and ornamental woody plants from beginning of sprouting and flowering to ripening, also falling of leaves for some species (immediate reporters, historical)

Version: v010

Publication date: 2024

Cite data set as: Phenological observations of wild plants, including forest and ornamental woody plants from beginning of sprouting and flowering to ripening, also falling of leaves for some species (immediate reporters, historical), Version v010

Dataset-ID: urn:x-wmo:md:de.dwd.cdc::obsgermany-phenology-immediate_reporters-wild-historical

Dataset-URL: https://opendata.dwd.de/climate_environment/CDC/observations_germany/phenology/immediate_reporters/wild/historical

ABSTRACT

The phenological data provide an overview of plant development in Germany over the year. The data are collected by volunteer observers and reported to DWD.

DATASET DESCRIPTION

| | |
|---------------------------|--|
| Parameter | horse chestnut, European beech, birch (all species), coltsfoot, black locust, dandelion, forsythia, common hazel, common wormwood, goat willow, silver birch, ash, black elder, blackthorn, large leaved lime, European alder, pedunculate oak, meadow foxtail |
| Temporal coverage | 1979-01-01 -- 2023-12-31 |
| Spatial coverage | Germany |
| Projection | WGS 84 (EPSG:4326) |
| Format description | Phenological observations of wild plants, including forest and ornamental woody plants from beginning of sprouting and flowering to ripening, also falling of leaves for some species (immediate reporters, historical) : Each file PH_Sofortmelder* contains the observation of a certain species (e.g., elder), with fixed object_id (e.g., 129). The rows are sorted according to Stations_id, reference year, phase_id. Each row corresponds to one observation. The list with all phenological stations and corresponding meta-data can be found here: https://opendata.dwd.de/climate_environment/CDC/help/PH_Beschreibung_Phaenologie_Stationen_Sofortmelder.txt . |

|--------------------------|---------------------------------------|-----|----------|----------------|
| Stations_id | DWD Station ID | | VARCHAR2 | |
| Referenzjahr | year corresponding to phase | | NUMBER | YYYY |
| Qualitaetsniveau | quality flags | | NUMBER | numerical code |
| Objekt_id | identifier of the phenological object | | NUMBER | 990 |
| Phase_id | identifier of the phenological stage | | NUMBER | |
| Eintrittsdatum | date of observation | | NUMBER | YYYYMMDD |
| Eintrittsdatum_QB | quality flag | | NUMBER | |
| Jultag | day of the year | | NUMBER | DDD |

Quality Information The QUALITAETS_NIVEAU (QN) shows the quality control procedure applied for a data report (of several parameters) for a certain reporting time.

QN = 1 : only formal control;
 QN = 2 : controlled on individual criteria;
 QN = 7 : second control done, before correction;

The QUALITAETS_BYTE (QB) denotes whether the value was objected to and/or corrected.

QB = 0 : not checked/not flagged;
 QB = 1 : had no objections;
 QB = 5 : doubtful;

DATA ORIGIN

A fixed observation area is assigned to every phenological observer. Each observation area has a station-id assigned by the network administration. The observer registers the first detected resp. the latest occurrence of determined growth stages independent of plant specimen, site or field. The observation were reported immediatly online or by phone and archived in the climate data bank of DWD.

VALIDATION AND UNCERTAINTY ESTIMATE

During the operational handling of phenological data each year a spatial quality control has been performed. Each year 1 - 2 % of the data are flagged to be wrong. Causes could be confusion of phases.

UNCERTAINTIES

Factor for uncertainty is the change of the observer.

CONSIDERATIONS FOR APPLICATIONS

BBCH code see [phase definition;https://opendata.dwd.de/climate_environment/CDC/observations_germany/phenology/immediate_reporters/wild/historical/PH_Beschreibung_Phasendefinition_Sofortmelder_Wildwachsende_Pflanze.txt].

ADDITIONAL INFORMATION

English and Latin names of plants are listed in [PH_Beschreibung_Pflanze.txt;https://opendata.dwd.de/climate_environment/CDC/help/PH_Beschreibung_Pflanze.txt]. For the English name of the phase see [PH_Beschreibung_Phase.txt;https://opendata.dwd.de/climate_environment/CDC/help/PH_Beschreibung_Phase.txt]. According to experience, at some sites a few plant species are not, not continually or only partly observed. From 1991 (West Germany)/ 1992 (East Germany) a modified observation programme was introduced, see [PH_Beschreibung_Phaenologie_Besonderheiten_Zeitreihen.txt ;https://opendata.dwd.de/climate_environment/CDC/help/PH_Beschreibung_Phaenologie_Besonderheiten_Zeitreihen.txt]. When using phenological data, it is advisable to use several stations characteristically of a natural area or natural area group. In this way, the data have less gaps and the specifics of a single station are less prominently influencing the results. The classification of natural areas and natural area groups used by Deutscher Wetterdienst (DWD) for phenological data is based on the map *Naturräumliche Gliederung und Waldverbreitung* (Meynen und Schmithüsen, 1953-1962), see also [Handbuch der naturräumlichen Gliederung Deutschlands;https://de.wikipedia.org/wiki/Handbuch_der_natur%C3%A4umlichen_Gliederung_Deutschlands]. Observation criteria for current pheno phases are defined in the [instructions for observers; http://www.dwd.de/DE/klimaumwelt/klimaueberwachung/phaenologie/daten_deutschland/beobachtersuche/beobachteranleitung.html].
